Foreword

The NHS is facing challenging times: There is growing demand, constrained resources and workforce shortages at every level in both the health and social care systems.

West Oxfordshire faces specific challenges:

- Population increase of 20,000 over the next 10 years due to housing growth
- An older population than the Oxfordshire average which is expected to continue to grow at a higher rate than other parts of the county
- For the rural cluster of West Oxfordshire, 43% of GPs are aged over 55 and potentially nearing retirement
- General practice is becoming a more stressful and a less attractive career option resulting fewer GPs working full time and practices struggling to recruit new GPs
- There is limited practice space
- Resources are not keeping pace with soaring demand.

The traditional primary care model has worked well over the years. However, with all these challenges, we, as local GPs and patients, recognise that the traditional model needs adaptation if it is to survive.

We want to build on the strengths of the services already available in West Oxfordshire. We plan to improve urgent same day access so patients can see a healthcare professional urgently when needed, to boost the workforce by diversifying the team so that patients can benefit from a range of different skills, to optimise the management of our growing elderly population and to develop our buildings to meet the needs of the increasing demand.

As local GPs, we do not want to miss this opportunity to improve local services for our growing population. With the multiple challenges we face there is not one easy solution. Through sharing resources across the locality and coordinating services and using the expertise of local clinicians and patients, we can all work together to strive for a system that is both resilient and excellent for the future.
West Oxfordshire Locality Executive Summary

**Locality overview:**
West Oxfordshire is home to a registered patient population of 81,505 (October 2017). The locality is made up of market towns and villages. Witney is the main urban area (over 27,000 people), and Carterton the second largest town (16,000 people). West Oxfordshire is the most rural district in the county with more than half the residents classified as rural. This creates specific challenges around transport links and access.

**What is working well:**
- Extended access hubs in Witney
- Use of broader skillmix, including ECPs and pharmacists
- Activity-led website signposting patients in Windrush
- Optimised reception rostering to improve retention recruitment
- Longer appointments in some practices

**Key locality challenges:**
- Estates that can match the pace of their growing population, in particular Witney, Carterton and Eynsham.
- Parts of the locality have a significantly older population, which causes challenges for access to services
- Recruiting enough staff for the growing ageing population.

Key Priorities for the West Oxfordshire Locality

We have identified four key priorities for the locality and thirteen specific workstreams which will support us to deliver each priority.

Successful delivery of the plan will depend on local and Oxfordshire wide planning for future workforce, estates and technology that will deliver the changes needed for a sustainable primary care that can meet the needs of the population in West Oxfordshire.

Part A: Introduction: Approach to developing the plan for the West Oxfordshire Locality

1. The purpose of this locality place based plan

Good primary care is the bedrock of a high-quality and cost-effective health system, and the NHS has traditionally prioritised primary care compared to many other health systems worldwide, which is generally accepted as key to its success and pre-eminence internationally in effective, safe, coordinated, patient-centred care and in efficiency.

The Oxfordshire Primary care Framework highlighted the importance of investing in the sustainability of General Practice, and supporting it to be the lynchpin in our health and care services. Transformation of these services will require new thinking and new models of care and delivery. The new model of primary and community care in Oxfordshire will be based on a number of operational principles:

- Delivering appropriate services at scale
- Organised around geographical population-based need
- Delivering care closer to home
- A collaborative, proactive system of care
- Delivered by a multidisciplinary neighbourhood team
- Supported by a modernised infrastructure.

The Oxfordshire Primary Care Framework seeks to describe a framework for GPs and their teams, working with their patients, to further describe how this model and the specific actions can work for their own local populations. The result of this is detailed in this locality place based plan clearly describing the future model for delivery of primary care across the locality.

This together with the GP Forward View (GPfV) and local implementation plan will ensure Primary Care remains the cornerstone of the NHS going forward. Many of the changes in developing new models of primary care will require additional resources with some of the funding released as a result of moving activity from hospitals into the community.

Gap analysis and prioritisation:
The plans have been tested against the priorities set out in the Oxfordshire CCG Primary Care Framework, the opportunities outlined in the GP Forward View and local transformation programmes. Proposals with funding consequences have been further assessed according to need across Oxfordshire. A sustainable model of primary is dependent on releasing funding from secondary care to invest into primary care.
2. Who helped to inform our plan?

This document draws on the knowledge and experience of Oxfordshire’s clinical community and patients to both describe and develop a West locality place based plan for the delivery of sustainable primary care and support for the model of moving care closer to home. It involves using the Oxfordshire CCG Primary Care Framework and opportunities outlined in the GP Forward View to achieve this aim. This process included:

**West Oxfordshire Locality Group (WOLG) meetings:**
- Membership includes GP commissioning leads from all 8 practices, some practice managers, patient representatives and district council officers.
- Substantial discussions at West Oxfordshire Locality Group meetings between 20 April, 11 May and 8 June 2017.
- Locality workshop with independent facilitator focusing on key questions 13 July.
- 14 Sept. - detailed discussion of proposed workstreams, including ranking of priority.

**Patient participation:**
- Patient engagement is an integral part of developing the locality plans. In particular meetings with:
  - Stakeholders organised by Healthwatch
  - PPG groups of West Oxfordshire to plan engagement
  - Robert Courts MP
  - Witney town councillors
  - Workshop session with councillors from West Oxfordshire District Council
  - West Oxfordshire Economic and Social Overview and Scrutiny Committee
  - Former patients of Deer Park Surgery
  - The locality patient forum (Public & Patient Partnership West Oxfordshire) discussed the draft priorities at their meeting on 13 June 2017. In addition, the forum chair and vice-chairs participated in the discussions at the locality group listed above.

- In addition, Oxfordshire CCG has held events in Witney and Carterton in November 2017. The workshops gave local people the opportunity to share their views on how GP and primary care services in their localities could be organised. These workshops and an online survey (for anyone unable to attend the workshops) follow and expand the work involving the CCG, local GP practices and
patient representatives, who have been discussing plans for the future of primary care services in Oxfordshire for the past six months. A full report on this public engagement and its feedback will be published in January 2018. This feedback will help shape and inform the draft locality plans before they are published in January 2018.

- If the final plans require significant changes that could adversely impact patients a more formal consultation will be undertaken for the specific service area.
- A summary of feedback from the patient forum, from the meetings with patients of former Deer Park surgery, and from the workshops in Witney and Carterton are highlighted in Appendix 3.

**Key messages:**

The West Oxfordshire locality based primary care plan builds on the principles identified by the Oxfordshire Primary care framework to create a 5 year strategy for the region.

The plan has received input from locality forum meetings as well as patient participation input to ensure that the knowledge and experience of West Oxfordshire’s clinical community is adequately captured.
Part B: The demographics of the West Oxfordshire locality population

1. Summary

1.1. Population

- The registered patient population at 1 October 2017 was 81,505\(^1\).
- The locality is contained entirely within the West Oxfordshire District Council area. It is made up of market towns and villages. Witney is the main urban area (over 27,000 people), and Carterton the second largest town (16,000 people). Other settlements are much smaller.
- West Oxfordshire is the most rural district in the county – more than half the residents are classified as rural.
- Known transport issues for village residents are made greater by recent reductions in rural bus services. Bampton and other villages are significantly affected. Carterton is currently well-connected by bus to Witney and onwards to Oxford.
- Public transport access to Oxford hospitals are more challenging especially for patients and carers with limited mobility. Long journey times and the costs and difficulty of parking are a major public concern.
- There is a significant armed services population associated with RAF Brize Norton, with approximately 1,000 civilians registered with the base medical practice in addition to service personnel. Health services for service personnel are commissioned by NHS England.

1.2 Age

Patients registered with West Oxfordshire practices are older than average, as indicated in table 1 and figure 1.

ONS estimates from 2015 indicate that the total estimated population inwards covered by the West OCGG locality as of mid-2015 was 81,500 residents of which 2,200 were aged 85 or over with the ward of Burford having a significantly higher proportion of the population aged 85+ (6%).

\(^1\) Data from NHS Digital October 2017: [http://content.digital.nhs.uk/gppatientsregistered](http://content.digital.nhs.uk/gppatientsregistered)
The 5 year period between 2017 and 2022, the age group with the highest growth in all districts and Oxfordshire County is expected to be aged 75 to 84 (+23% in Oxfordshire and +27% in the district of West Oxfordshire).  

Figure 1: Age distribution of population registered in West Oxfordshire practices and all Oxfordshire practices

Figure 2: Wards: % of people aged 85+ (ONS 2015)

Source: 2014 ONS estimates. Housing projections set out below indicate that growth in the younger age groups is expected to significantly exceed ONS estimates.
1.3 Care home population

- As of June 2017 there was a total of 18 care homes with 647 care home beds in wards in the West locality.
- The ward with the greatest number of care home beds was Witney East.

1.4 Housing growth

ONS population projections do not take into account the significant housing growth expected in Oxfordshire over the coming years. Based on district council data collated for the Oxfordshire Infrastructure Strategy\(^3\), there are 3,600 dwellings expected in the locality over the next 5 years and over 8,000 in the next years. At an average rate of 2.4 occupants per dwelling, estimated occupancy for these new homes is 8,700 in 5 years and nearly 20,000 in 10 years as shown in table 2. Most development will be in the Witney, Carterton and Eynsham areas.

2. The health of our community in West Oxfordshire locality

Health outcomes are generally better than average in the West Oxfordshire locality. A summary of West Oxfordshire’s health needs analysis for the locality (June 2016) is as follows:

- Although the rates of poverty affecting children and older people in the West locality were lower than the OCCG average and national average, deprivation data shows there were areas of Witney that had the highest rates of poverty affecting children and older people.
- The following health outcomes were higher than the OCCG average:
  - Deaths from All Causes under 75 years
  - Alcohol related hospital admissions
  - Children aged 10-11 who are overweight or obese
- The Freeland & Hanborough ward had a higher death rate from stroke than predicted by the age of the local population, but outcome may have been influenced by the 65 care home beds within Freeland and Hanborough ward.
- The Witney South ward had a standardised admission ratio for intentional self harm above the England average.
- West Oxfordshire locality patients have a higher prevalence of long term conditions than average, which reflects the higher age of the population (table 3). Practices manage chronic diseases of their patients extremely well, with OOF achievement (quality measure of managing long term conditions) near 100%.

</tr>
</tbody>
</table>

Key messages:

Health outcomes are generally better than average in the West Oxfordshire locality. Patients in West Oxfordshire are older than average and the age group with the highest growth is expected to be aged 75 to 84.

In addition there is significant housing growth in Witney, Carterton and Eynsham which will have an impact on the use of services.

Source: Public Health England Public Outcomes Framework unless otherwise specified
Part C: How our population in West Oxfordshire accesses services

- 6 practices have above average GP-referred first outpatient appointments compared to the OCCG average (figure 4). This means the locality average is slightly above the OCCG average. However, the email service to secondary care consultants is used a lot in West (with significant variation across practices). There is some evidence that it can reduce referrals and this is recognised by GPs.
- Half the practices show a higher usage than OCCG average for out of hours (OOH) GP services. Overall, OOH use is slightly above the OCCG average.
- Use of A&E activity in West Oxfordshire is much lower than the CCG average (figure 5). This is associated with successful earlier campaigns to direct patients to the MIU as a better and more cost effective alternative to A&E and effective signposting in primary care.
- Urgent care emergency admissions are just below OCCG average.

Figure 4: GP-referred first outpatient appointments, standardised rate per 1,000

Figure 5: A&E attendance across Oxfordshire, rate per 1,000
1. Overview of Primary and Community Care

The West locality has 8 GP practices, working in two clusters, offering primary care from 10 locations.

1.1 Access to primary care in West Oxfordshire Locality

Core primary care services are delivered Monday-Friday from 0800-1830 hrs by all practices in the locality.

GP Federations also provide additional GP and nurse appointments outside of normal practice opening hours, which are funded by the GP Access Fund scheme. These appointments are pre-bookable and are intended to provide routine appointments to those patients for whom normal practice opening hours are not convenient.

This service is delivered in rotation from practice sites and are available from 6:30-8pm Monday-Friday. There is also availability for several hours on a Saturday. Sunday appointments are provided by a hub in Banbury but are open to West Oxfordshire patients. The appointments are available to patients registered at any practice in the federation, regardless of the location of the clinic. There is currently little demand for routine weekend appointments but we are required to offer these as it is a national requirement.

1.2 Primary care in care homes

For patients in care homes, the CCG commissions an enhanced service for Proactive Care Home Support from primary care. This is an optional scheme which involves a practice forging a closer working relationship with one or more care homes, and providing GP services to the majority of the residents in these homes.

1.3 Out of hours

Outside normal practice opening hours, all patients have access to GPs and nurses working in the Out of Hours Urgent Care Service. Oxford Health

**Figure 6: Map of practices in West Oxfordshire locality**
Foundation Trust holds the contract for delivery of this service and the service is delivered from the Witney Hospital site. Appointments are accessed via the NHS 111 service, and cannot be booked in advance or for routine problems.

1.4 Urgent Care

1.4.1 Minor Injuries Unit (MIU)

The MIU is a nurse-led service delivered from Witney Community Hospital from 10:00 to 22:30 Monday to Sunday. It is a walk-in service (meaning patients do not need to be referred). It also provides access to x-rays from 10:00 to 19:30 both to MIU patients as well as to patients referred directly by their GP.

1.4.2 Urgent Access Hubs

GP federations provide additional urgent same-day GP and nurse appointments at a ‘hub’ based at the Windrush Health Centre in Witney. There are also routine pre-bookable physiotherapist appointments for assessment of musculoskeletal problems. The patient must be registered at any practice in the federation and the appointments can only be accessed through their practice (it is not a walk-in service). It is open from 9:00 to 18:00 Monday to Friday and funded through a national initiative and the GP Access scheme.

This service increases the capacity of primary care to manage urgent non-housebound patients. It is suitable for patients who require same-day attention but where continuity of care by their own GP on that particular occasion is not paramount to their effective management. This service increases access for urgent patients, whilst also freeing up additional time in practices for GPs to spend with complex patients where continuity of care is important.

Urgent access hubs are popular with both patients and GPs. Capacity is, however, limited and an increase in appointment availability would be beneficial to match demand. In addition, as the hub is located in Witney, it is predominantly used by those practices based in and around Witney whilst more rural practices (particularly Burford, Charlbury and Bampton) use it less frequently. This rural cluster is interested in developing a second hub in Carterton. This would be closer to their patients and offer equity of urgent access, in line with the Witney practices.

1.4.3 Primary Care Visiting Service (PCVS)

The Primary Care Visiting Service is led by Emergency Care Practitioners (ECPs). They visit acutely unwell housebound patients at the request of the patient’s GP. This service runs in-hours from Monday to Friday and increases the capacity of primary care to manage urgent housebound patients. Capacity is currently 5 WTEs shared across 3 localities. Increased capacity will be required to match the demand from an increasing elderly and housebound population.
1.4.4 Emergency Multidisciplinary Unit (EMU) in Witney

The Witney EMU is a great asset to the current local services. Local GPs and other community services can refer adults who are acutely unwell who require investigation and treatment but are unlikely to need overnight admission. In this way, it provides a less acute medical setting than the hospital and is closer to home. Oxford Health Foundation Trust holds the contract and the unit is staffed by both physicians and nurses.

1.4.5 Future plans for urgent care

As part of the Urgent and Emergency Care Review, NHS England intends to establish commonality in the specification for urgent care through urgent treatment centres (UTCs) by March 2019. There are multiple urgent care services based in Witney and a wide range of discrete primary, community and secondary care health services already available on the “health campus” formed by Witney Community Hospital and Windrush Health Centre. However, there is currently little integration. Looking towards an Urgent Treatment Centre (UTC) model which coordinates these services may facilitate sharing of staff, buildings and resources and may also allow for a more streamlined, more efficient, and less confusing service.

</table>

6 X-ray available 1000-1930 only
7 Not available at Witney for last 18 months
8 “Interface medic” – experienced gerontologist or GP with special interest
1.5 Community elective services

Community health services on the Witney Community Hospital and Windrush Health Centre “health campus” include:

- Community hospital including therapies and in-patient care
- Range of outpatient clinics
- Endoscopy (independent provider)
- Podiatry clinic
- Sexual health clinics
- Independent audiology clinics
- GP out of hours service base
- Bladder & bowel service
- Community ultrasound.

The MSK Assessment, Triage and Treatment (MATT) service is provided from the former Deer Park Medical Centre building on the west side of Witney, by an independent provider, Healthshare. District nurses are mostly based at the hub offices on the edge of Witney, with some health visitor teams working across the area and based at Cogges Surgery and Carterton Health Centre.
Focus on primary care in Witney

Witney is the largest town in the West Oxfordshire locality. It has a population of approximately 28,000 and is served by 3 practices located in the town following the closure of Deer Park Medical Practice earlier this year (see appendix 4 for more detail) – Nuffield Surgery and Windrush Medical Practice in the town centre and Cogges Surgery in East Witney. Windrush Health Centre is part of a "health campus" on the same site as Witney Community Hospital. A full list of services provided at Witney Community Hospital is provided on page 17.

Practices in Oxfordshire have been working together to provide pre-bookable and same day, evening and weekend appointments with general practice since 2015, strengthening the support available for those with the most complex needs and introducing new ways of accessing services. This service is delivered from 6:30-8pm Monday-Friday at practices across West Oxfordshire and on Saturday at Windrush Health Centre. The CCG also commissioned over 1,000 additional appointments per month for patients in West Oxfordshire to be delivered during core GP hours by GPs, advanced nurse practitioners and physiotherapists – these are all provided at Windrush Health Centre and are available to all patients registered in Oxfordshire practices. The weekday services have received positive feedback from patients. The locality plan for West Oxfordshire indicates an intention to increase capacity in the locality – with options for locations to be considered by practices to ensure maximum utilisation. In addition, an Urgent Treatment Centre model on the site of the current Minor Injuries Unit at the Community Hospital, if it meets the appraisal process to be carried out by March 2018, will ensure a consistent route to access urgent appointments, over time to be booked through NHS 111 and GPs.

The West Oxfordshire Local Plan 2031* identifies Witney as a key area for future development with an identified housing need of 4,400 homes to 2031 shown in figure 7. This includes:

- Confirmed developments in West Witney of 1,000 dwellings (A) and in Burford Road of 260 dwellings (B)
- Strategic Development Areas on the eastern side of Witney of around 450 dwellings (C) and to the north of Witney of around 1,400 dwellings (D)
- Non-strategic housing allocations on Woodford Way Car Park of 50 dwellings (E) and on land west of Minster Lovell of 85 dwellings (to the North West of the map).

Land to the west of Down’s Road (F) has additionally been identified as an ‘area of future long-term development potential’ to include consideration of opportunities for new housing and employment to meet identified development needs beyond 2031.

Future primary care infrastructure in Witney will need to respond in a timely and appropriate way to future housing growth. The Cogges Surgery has recently received funding from NHS England’s Estates and Technology Transformation Fund to improve clinical capacity. In the longer term, Nuffield Health Centre has indicated its intention to relocate and expand capacity and Cogges Surgery will consider increasing capacity further with the possible need to relocate. This will ensure that patients from a much wider area will be able to access primary care services at the surgery. The future location of the surgery will be subject to an options appraisal which will include considerations regarding accessibility, capacity and expected utilisation, and will be subject to consultation with its registered patients. An options appraisal will also be completed on how best to provide services.

*To read the West Oxfordshire Local Plan 2031 visit West Oxfordshire District Council website: [https://www.westoxon.gov.uk/media/1037296/Local-plan-2011-2031.pdf](https://www.westoxon.gov.uk/media/1037296/Local-plan-2011-2031.pdf)
2. Primary care workforce

2.1 General practitioners

Practices responded to a survey in September 2017 regarding capacity details, gaps in current staffing and known/planned for retirements. Table 6 indicates the number of sessions currently delivered, the future number of sessions required and the number of GPs required to continue delivering the same level of service. Future projections do not account for the number of GPs that are expected to retire in the next 5-10 years, although it is expected that up to 30% of the current workforce will retire in the next 3 years.

Future numbers of GPs is likely to be impacted by:
- Intentions across Oxfordshire to move to longer 15 minute appointments for patients with greater needs
- Potential changes in skillmix and a greater role for signposting and community champions to support patients manage their long term conditions.

2.2 Other primary care workforce

In terms of other general practice in the locality, table 7 indicates current sessions offered by treatment room nurses, advanced nurse practitioners, healthcare assistants and phlebotomists taken from the workforce survey. Plans for future recruitment of staff are unlikely to meet future demands from population growth.

As indicated in tables 7 and 8, practices in West Oxfordshire have not yet begun to employ a broader skillmix to deliver primary care in the future, with the exception of 2 practices that employ advanced nurse practitioners. There is some interest in employing pharmacists, mental health practitioners; practices have expressed concern about indemnity and employment models as a barrier to working across practices.

Key messages:

There is currently good access to primary and urgent care in West Oxfordshire. It is intended to increase urgent access through the hubs, particularly in the rural West and to develop an urgent treatment centre in Witney with better integration of services.

There is significant growth in West Oxfordshire which will have an impact on primary care services and future workforce. Growth projections suggest that a further 10 GPs (FTE) will need to be recruited to meet demand in the next 5 years (this does not account for retirements). Practices will therefore need to consider employing a broader skillmix to ensure a more sustainable workforce for the future.
Part D: How we will meet the needs of our community

Priority 1 – Meet the healthcare needs of the ageing population in the locality

Background

West Oxfordshire has among the oldest population in Oxfordshire, which is set to grow rapidly in the coming years. As the older population increases, so will the population living in nursing and residential homes.

Objectives:

- Prevention of, and early identification of, health and social care crises in frail adults, both at home and in care homes.
- Care of frail adults in the least acute setting which is appropriate to their needs.
- Move more acute services from the John Radcliffe Hospital to EMU and community settings in the locality.
- Support the needs of housebound patients or those living in assisted living accommodation.

Plans:

a) **Build on the current EMU model**: The Witney EMU is a great asset to the current local services. Local GPs and other community services can refer adults who are acutely unwell who require investigation and treatment but are unlikely to need overnight admission. In this way it provides a less acute medical setting than the hospital and is closer to home. We plan to meet clinicians from Witney EMU to explore the factors currently limiting their capacity and ensure that primary care and other community services are making most efficient use of this resource.
b) **Virtual ward rounds**: We will work with EMU to develop a plan for virtual ward rounds of identified frail or medically unstable patients. This would aim for prevention or early identification of health or social crises and to forward plan. This could include input from a gerontologist or interface physician, social worker, nurse and GP.

c) **A weekly community pre-bookable gerontologist clinic** to review the most medically complex or frail elderly, as requested by their GP. We plan to work with EMU to develop a plan that uses EMU as a base and will allow sharing of resources, staff and space. A business case will need to be developed.

d) **Care/nursing homes**: Some local practices welcome a plan for a gerontologist or interface physician to manage their care home patients. This could be an extension of the current hospital outreach programme and involve both virtual and real ward rounds. This would allow preventative measures for keeping patients well, early identification and management of physical or mental health deteriorations and greater support to care home staff by having a direct link with medical support. In turn, these measures may reduce inappropriate acute hospital admissions and keep patients closer to home. As some practices are keen to continue to manage their care home patients themselves this would be an optional service. The patient would remain on the practice list. A business case will need to be developed.

e) **Increasing the capacity of the primary care visiting services**: Emergency care practitioners visit acutely unwell housebound patients at the request of the patient’s GP. This service increases the capacity of primary care to manage housebound patients with medically urgent conditions. However, capacity is currently limited to 5 practitioners across 3 localities. Increased capacity will be required to match the demand from an increasing elderly population.

Plans for other services set out in subsequent priorities, in particular social prescribing and urgent access hubs, will also support care for the elderly population.
Priority 2 – Ensuring safe and sustainable primary care that delivers high quality services

Background

The traditional primary care model has worked well over the years. However, in order to manage the increase of 20,000 patients expected over the next 10 years (and the 5,000 additional patients in and around Witney over the next 5 years), this model will rely on adequate workforce, building space and resources.

It is predicted nationally that 30% of GPs are planning to retire in the next 5 years. For the rural cluster of West Oxfordshire, this figure may be even higher, with 43% of GPs aged over 55\(^9\). With the challenges around GP recruitment, limited practice space and resources not keeping pace with soaring demand, we recognise that the traditional model needs adaptation. Without this, primary care will not be sustainable longer term.

Objectives

- Sharing of resources, staff and knowledge across practices
- Streaming of patients to the most appropriate service to meet their needs
- Boosting the primary care workforce, both GPs and other healthcare professionals
- Optimising space within practices and expanding buildings to manage the population growth
- Patient education about the services available and that a GP will not always be the first or only port of call.

Plans

a) Increasing the capacity of the urgent access hubs: This service increases same day urgent access. In turn, this releases GP time in practices. This allows them to devote it to those requiring longer appointments in order to meet all their needs and for whom continuity is important. However, capacity is currently limited and an increase in appointment availability would be beneficial to match demand. There is also an issue of inequity of use of the urgent access hub. As it is located in Witney, it is predominantly used by those practices based in and around Witney, while more rural practices (particularly Burford, Charlbury and Bampton) use it less frequently. If the hub were to be located closer, the rural cluster practices have stated that they would use it more. Therefore, they propose that we plan for a second hub in Carterton.

\(^{9}\) General and Personal Medical Services, England High-Level March 2017, Provisional Experimental statistics, NHS Digital
b) **Workforce:** All practices are potentially vulnerable because of difficulty recruiting staff, a high proportion of retirements in the next few years and increasing list size. The roles of allied health professionals need to be developed in order to support the GP workforce. The workforce model will be based on GP-led multi-disciplinary teams and include nurses, healthcare assistants, physiotherapists, clinical pharmacists and mental health workers. The allied health professionals will work either at practice level or at neighbourhood level depending on local need. The WestMed urgent access hubs and the primary care visiting services are successful examples of this at federation level.

Training of allied health professionals to increase their skills will be needed. This may include upskilling of healthcare assistants to perform duties traditionally performed by practice nurses, such as wound care or ECGs, or it may include training in nurse prescribing. The CCG’s practice nurse educational coordinator will help practices across the locality to find appropriate training and mentoring for HCAs wanting to develop new skills. This training could be delivered at neighbourhood to locality level. Practices may also be able to provide some training “in house”.

Development of portfolio roles for GPs. This may include a post rotating between a practice (or a set of practices), the urgent access hub, interface medicine or GP-specialist clinic (for example, the GP-cardiologist clinic). These posts will be developed at federation level according to local need and then advertised to all GPs, but with a particular focus on GP trainees and newly qualified GPs.

Workforce development is a priority across Oxfordshire. More detail on CCG wide support is provided in part E.

c) **Estates development and infrastructure**

Investment in GP practices to increase capacity for the rising population will be required and practices may consider merges where this makes sense logistically and financially. Current use of space, such as the community hospital, Deer Park site and Windrush Health Centre, needs to be reviewed to optimise space usage and boost joint working, for example, by co-locating urgent services on one site. Further intentions on estates prioritisation to support the plans is provided in part E.

d) **Involvement of patients:** engagement with practice PPGs as well as the locality forum to:

- publicise important health messages,
- publicise the range of services available to patients and what the most appropriate setting is for their need e.g. MIU, pharmacist, minor eye conditions service (MECs).
- share the pressures faced by the local NHS
- Educate and manage patient expectation around a changing healthcare model. This may include seeing a nurse or being referred to the urgent access hub when they may have traditionally seen their own GP.
e) Development of practice websites: Windrush Medical Practice website is already an excellent example of enhancing signposting of information to patients, improving access as well as being an effective way of streaming the requests to the most appropriate person within the practice. Other practices are keen to learn from their experiences. Investment will be needed to set up the sites.
Priority 3 – Improving prevention

Background

A central tenet of the GPFV is commitment to more initiatives around preventative care. Clear signposting and increased access to self-care information and resources can empower patients to play a more pro-active role in their healthcare. The benefits of this are that patients are less reliant on acute services and feel confident using services such as pharmacies to control their symptoms where appropriate. A Kings Fund report identifying priority areas for Clinical Commissioning Groups states that expenditure on prevention is ‘an excellent use of resources’. In a review of more than 250 studies published on prevention in 2008, nearly 80% were within the National Institute for Health and Care Excellence’s threshold for cost effectiveness\(^{10}\).

Objectives

a) Development of social prescribing model: There is good evidence that social isolation impacts on people’s health and also uses up a huge amount of scarce GP time. In addition, many patients with chronic diseases need extra support with their management and this can often be provided by trained volunteer peers, rather than healthcare professionals. Many patients with chronic diseases will also suffer social isolation due to the real, or perceived, effects of their illness. For this reason, combining self-management and social prescribing hubs makes good economic sense, as there will be some overlap of skills and resources. There are many examples countrywide of social prescribing schemes, often run in conjunction with third sector organisations. We would aim to adapt one of these schemes to meet our needs, building on work already done by some practices. We will are also aiming to develop a proactive physical activity referral scheme(s) in partnership with West Oxfordshire DC and integrated with other health prevention activity. This would target people before they develop a long term condition, or are identified at risk of developing such a condition, as well as patients already identified on chronic disease registers.

b) Enhanced signposting role for receptionists: As part of the General Practice Forward View, CCGs have been allocated funding to support practices to train reception and clerical staff to undertake enhanced roles in active signposting and management of clinical correspondence. This provides patients with a first point of contact which directs them to the most appropriate source of help. Receptionists acting as care navigators can ensure the patient is booked with the right person first time.

Priority 4 – Planned care closer to home

Background
We are integrating care between primary, community & secondary care for patients with diabetes enabling patient empowerment and self-management with a focus on population health outcomes. Pilots have commenced in the North East locality with practice diabetes multi-disciplinary team meetings and in the next year it is planned to have an alliance contract between the GP federation OUH, and OH to deliver an integrated diabetes service co-ordinated by a locality clinical board with an outcomes based contract and resources and responsibility share between the alliance parties. Effective use of ICT and data sharing for a diabetes dashboard, screen sharing between primary and secondary care - enabling joint consultations and earlier specialist intervention – will be integral to the success of the project.

As part of the planned care programme, there are now musculoskeletal hubs running across the county, with a bladder and bowel service and a local optometrists offering a minor eye condition service. This improves care closer to home and promotes prevention.

Objectives
Following the success of the local diabetes service in the North East, we plan to introduce this into the West locality. If successful, we will build on the model to bring chronic disease management closer to home, extending to other conditions, including cardiology and COPD.
In response to the key objectives outlined in each of the priorities, we have recommended 13 workstreams. Each workstream responds to the challenges of at least one priority. The chart below indicates how each initiative aligns to the different priorities.

<table>

</table>
| Community gerontologist or interface physician for complex multi-morbid patients | Develop a plan for virtual ward rounds of identified frail or medically unstable patients. This could include input from a gerontologist or interface medicophysician, social worker, nurse and GP. Weekly community pre-bookable gerontologist clinic to review the most medically complex or frail elderly, as requested by their GP. | Closer working with community services including district nursing and Hospital at Home.  
- Greater support to high-need patients following hospital discharge. | Solicited through proposal and business case                                                                                       | Recurrent| 1              |
| Locality diabetes service, and extend to other conditions, such as heart failure and COPD | Integrated care between primary, community & secondary care with locality based diabetes clinical boards following success of pilot in North East Oxfordshire; roll out to West Oxfordshire. | Consistent service across the locality. Supports bringing care closer to home.                                                            | To be agreed with planned care team                                                   | 2 years  | 1              |
| Expansion of primary care visiting service                                         | Increase the capacity of the visiting service                                      | Supports primary care sustainability, allows assessment of frail elderly patients earlier in the day, supporting early assessment in an ambulatory care centre supporting care at home.  
- Can help support care at home for frail elderly                                     | To recruit additional EPCs from current provider                                          | 5 years  | 1              |
| Same-day care services in Witney and Carterton with increased capacity             | - Integrated pathway for patients who need a same-day clinical response.            | - An agreed definition of urgent / same-day care across the locality.  
- Consistent level of care across same day care services; avoiding gaps, duplications and hand-offs.  
- Efficient use of clinical workforce.  
- Wider range of services provided for patients: GP, nurse, mental health worker and others – pharmacy, physio?  
- Increased same-day capacity for local patients within existing resources of clinical staff and funding e.g. by focusing on Advanced Nurse Practitioners (prescribing) offering a minor ailments service, with GP oversight (may be remote). | To agree with federation                                                                                         | Recurrent| 2              |
| UTC in Witney | Development of MIU to have full UTC capabilities, including: Access 12 hours a day 
GP-led, staffed by GPs, nurses and other clinicians, with access to simple diagnostics 
Consistent route to access urgent appointments, including booked through NHS 111, ambulance services and general practice with a walk-in access option retained. 
Integration over time with other urgent and emergency care services working in conjunction with the ambulance service, NHS111, local GPs, hospital A&E services and other local providers. | Clarity for patients on urgent access 
- Reduced attendance at, and conveyance to, A&E 
- Improved patient convenience 
- Sharing of staff, buildings, records and resources and may allow for a more streamlined, more efficient and less confusing service. | To confirm with provider capacity and utilisation | By December 2019 | 2 |
| Wider primary care clinical skill mix delivered through practice-based and cluster services to supplement existing GP and practice nurse staffing | - Pharmacists (practice/cluster or locality level) 
- Diagnostic physiotherapy (note self-referral to MSK Assessment & Treatment Service expected after December 2017). 
- Physician associates, social community nurses. 
- Other clinical roles (NB OCCG sourcing further evidence-based guidance). | - Improved range of services offered to patients. 
- Reduced pressure on GP capacity, freeing up time for 15 minute appointments with complex patients. 
- Alleviates pressure on recruitment of GPs. | 1) Agree funding 
2) Set out scope of work for pharmacists and employment model 
3) Recruit | 1 year | 2 |
| Practice based: Mental health practitioners | - Mental health practitioners in the rural West area learning from the Chipping Norton rural cluster model. | These mental health workers would be able to see patients with medically unexplained symptoms, severe mental illness, and other patients whose complex mixed physical and mental symptoms are challenging in primary care, freeing up GP time and providing better and more appropriate care for those patients. | 1) Agree funding 
2) Set out scope of work for mental health worker and employment model 
3) Recruit | Non-recurrent initially | 2 |
| Enhanced signposting role for receptionists | - Enhanced signposting role for reception/admin teams (including face to face, telephone, other) | - Improved access to service information for patients. 
- Effective integration of care; greater collaboration between services and joined up care around the patient. 
- Reduced demand on core primary care services by shifting patient care demands to other providers/third sector. | 1) Agree funding and resources available in other sectors (financial and people) 
2) Determine cohorts of patients 
3) Agree siting and employment 
4) Agree how to structure scheme and socialise | Initial training | 1 |
| Development of practice websites | Following success of Windrush practice website that provides enhanced signposting information, support other practices that wish to adopt similar model. | - Enhanced information to patients and education (including work in schools). | To confirm with provider | Recurrent | 2 |

### Key messages:

**West Priorities:**

1. Meet the healthcare needs of the ageing population in the locality
2. Ensuring safe and sustainable primary care that delivers high quality services
3. Improving prevention services
4. Planned care closer to home

The 13 workstreams above each respond to at least one of the 4 locality priorities and operate as the core recommendations of this plan.
Part E: Making a success of our plan

Delivery of this plan represents a significant ambition for service improvement and requires strong collaboration from all parts of the NHS, local authorities, Health Education Thames Valley, the Oxford Health Science Network and the voluntary sector. This section sets out the support the CCG will provide, working with partners, across all localities and how they will apply in West. A key aim across all enablers is to strengthen practice sustainability.

1. Workforce:

A workforce of appropriate number, skills and roles is essential for delivery of the plans in the context of significant housing growth across Oxfordshire and an ageing population. In line with the Oxfordshire Primary Care Framework, the CCG is developing a workforce plan across the staff groups with the aim of

- increasing capacity in primary care;
- upskilling existing staff; and
- bringing in and expanding new roles.

This includes concrete working with partners to:

- Make Oxfordshire an attractive place to work, in particular areas that have had historical difficulties in recruiting
- Facilitate a flexible career path through developing specialist roles and encouraging professional integration
- Increase training capacity and encourage GPs to remain in the area where they have trained
- Consider implementing a local bursary or training and refresher scheme
- Recruit internationally
- Develop a career development framework for staff working in primary care
- Implement mentoring schemes for all staff groups with the support of experienced professionals
- Continue to support the introduction of new general practice support staff to take workload off GPs, such as physician
• associates, medical assistants, clinical pharmacists and advanced practitioners, building on the success of pharmacist and mental health workers in general practice
• Develop a standardised approach to the development and training of healthcare assistants
• Increase community-based academic activity

Federations will have an important role in ensuring resilience in primary care and enabling practices to work at scale, for example offering employment models that enable practices to use resources flexibly across clusters and neighbourhoods.

An effective workforce planning requires:
• a detailed understanding of the health and wellbeing needs of the population
• opportunities to develop and design roles that are fit for the demand and needs of the population.

The CCG will provide support at locality level for practices to model and plan the workforce appropriate for populations of 30-50,000. This may include sharing staff across practices as set out in priority 2 above or providing support for mergers, where requested by practices, to provide a greater level of sustainability.

2. Estates

The Primary Care estate across Oxfordshire needs considerable investment to make it fit for the future: some practices require capital investment now and large areas of housing growth will mean that infrastructure will need to be improved in order to deal with the population increase. As set out in the Oxfordshire Primary Care Framework, capital investment will only be partially through NHS sources and we will need to consider other sources (e.g. local authority bonds, developer contributions).

The CCG will need to prioritise schemes for estates developments in line with the overall resourcing available. Some practices need to improve or extend their premises so that they can continue to deliver mainstream primary care more sustainably and to a larger number of patients. Other practices have larger-scale ambitions to deliver services over and above what is generally provided in general practice, often in collaboration with other practices and in partnership with other NHS organisations, local authority and voluntary sector agencies. Both types of scheme will need to demonstrate innovation and maximise opportunities to work collaboratively, but for the larger-scale schemes, which are likely to come at a higher cost, a more comprehensive range of criteria will be used for prioritisation that are in line with the CCG’s estates strategy and plans for primary care.
The CCG will additionally provide support for appraisal of estates solutions together with community health and local authorities, where relevant. This includes solutions that respond to developments in new models of care, or which have the potential to deliver direct financial efficiencies, for example through digitisation of notes or merged partnerships.

In the West locality key estates priorities include:

- Review use of space in Windrush Health Centre and Witney Community Hospital to boost joint-working and maximise use of this health campus. Looking towards an Urgent Treatment Centre (UTC) type model which coordinates these services may facilitate sharing of staff, buildings, records and resources and may allow for a more streamlined, more efficient and less confusing service.

- Identify needs and opportunities for primary care infrastructure growth to meet future requirements. Specifically this includes:
  - Replacement of Long Hanborough Surgery (project agreed following developer agreement)
  - Minor improvement to clinical capacity of Cogges Surgery in Witney (ETTF funding allocated)
  - Expansion of Eynsham Medical Centre
  - Expansion of Broadshires Health Centre or redevelopment of Carterton Health Centre
  - Expansion and relocation of Nuffield Health Centre and / or Cogges Surgery.

3. Digital

‘Digital’ has a significant role to play in sustainability and transformation, including delivering primary care at scale, securing seven day services, enabling new care models and transforming care in line with key clinical priorities. In line with Oxfordshire’s Local Digital Roadmap, the CCG’s focus will be to support:

1. Records sharing for cross-organisational care, in particular Advanced CareNotes which are used by community and mental health services and are currently not interoperable with any other health record used by general practice (EMISweb and Vision) or secondary care (Cerner Millennium)
2. Citizen facing technology, including aligning portal plans and auditing apps that empower patient self management
3. Risk stratification and modelling to support care co-ordination, clinical decision support and referral management tools
4. Infrastructure and network connectivity, including shared network access and access to records by care home staff
5. Information Governance, developing confidence in primary care over how data is accessed.
Key digital priorities for the West locality include:

- Shared patient record accessible to all local services. In future, community and mental health workers in the locality would be able to at least access the EMIS GP record via EMIS Clinical Services, allowing them to see valuable clinical information about patients in their care and to enter their own information into those records for other clinicians (such as GPs) to see. This would significantly reduce the status quo problem of patients expecting GPs to be updated on their recent discussions with the mental health team, and so on, and lead to more streamlined and more effective care for all patients.

- Access for care homes. All care homes Oxfordshire will be encouraged and supported to obtain HSCN access, which will allow sharing of clinical record data directly with care home computers. This would not only mean that care home staff could access GP records for their patients, but also that visiting clinicians (whether GPs, clinical pharmacists, Hospital at Home, primary care visiting service, community nurses, or others) would be able to access GP records on-site and be able to use the care home HSCN wi-fi to access their own record systems on their own devices.

- Use of websites and directory of services for signposting. Highlight the Windrush example

- using ICT to maximise efficiency of clinical triage.

4. Funding

Implementation of the plans will require investment either through core funding or through release of funding in secondary care over time. The vast majority of investment in primary care is determined through a nationally agreed formula. However, some additional funding that was secured through the Prime Minister’s Challenge Fund and the subsequent GP Forward View has been invested recurrently in general practice and will continue to be invested as part of the local plans. Remaining funding will be allocated to the plans according to agreed criteria for prioritisation, including:

- Patient outcomes and experience
- Primary care sustainability
- Health inequalities and deprivation
- Alignment with national and regional strategies and other transformation programmes
- Whether they are able to be delivered successfully within the required timeframes, and
- Population coverage.
In addition, the CCG aims to improve practice resilience by reducing the bureaucracy of reporting and streamlining payment systems where possible.

The CCG will support future investment in workstreams that are intended to deliver savings elsewhere in the system subject to a robust business case. This will provide a significant step forward in delivering accountable care, in which resources are allocated according to the needs of the population of Oxfordshire and in which partners in the health and social care system share financial and clinical accountability to deliver better outcomes.

5. Outline mobilisation plan

See following page.

Key messages:

In order to deliver this plan, there are 4 key enablers that must be considered:

- **Workforce** – focus on retention and recruitment as well as utilising different staffing skill-mixes to meet community demand
- **Estates** - ensuring that services are delivered from appropriate venues in terms of geographical location, size and upkeep
- **Digital** – utilise digital technology to improve access and help deliver patient centric care through increased technological capability and improved interoperability
- **Funding** – understanding where funding can be allocated most efficiently to meet the needs of the community outlined in this plan

Notes:
- Regular appraisal and review of estates in line with CCG and ETTF timeline
- Assessment of feasibility
- Implementation of agreed changes
- Timetable subject to options appraisal

Priority Areas:
- Frailty pathway
- Clinical Pharmacists
- Mental Health Workers
- Social prescribing
- Access Hubs NE & W
- Extend diabetes model to services
- Urgent Treatment Centre in Witney
- New workforce models
- Estates Plan
- Notes digitisation
- LDR implementation

Workstream:
- Confirm service spec
- Recruit and implement
- Review Emu Services
- Business case
- Prepare new agreed service
- Implement if agreed
- Roll out. Integrate plan for MHFV into workstream for mental health workers
- Review
- April to September - Mobilisation
- Oct - Soft Launch
- Review schemes
- Jan - Fully Operational
- Options appraisal
- Agree spec
- Roll out changes
- Options appraisal on UTCs
- Implement agreed changes
- Timetable subject to options appraisal
- Extend diabetes model to services
- Draw on learning from diabetes model to scope and deliver transformation initiatives across COPD / breathlessness
- Implement agreed changes

Enablers:
- Regular appraisal and review of estates in line with CCG and ETTF timeline

The GP Forward View was published in April 2016 and sets out NHS England’s commitment to improving patient care and access, and investing in new ways of providing primary care.

Service provided by Oxford Health for patients as an alternative to hospital admission support earlier discharges from hospital for people who are well enough to return home. The plan proposes neighbourhood community teams in place of HAH, providing a more robust clinical decision-making and risk-holding capability.

The Independent Reconfiguration Panel is the independent expert on NHS service change. IRP is an advisory non-departmental public body, sponsored by the Department of Health.

The Independent Sector Treatment Centre provides mental health and community services in Oxfordshire. OHFT also holds the contract for the Luther Street homeless service in Oxford.

A service run by emergency care practitioners to provide emergency assessment and treatment of patients in the working day in addition to home visits.

A service run by emergency care practitioners to provide emergency assessment and treatment of patients in the working day in addition to home visits.
All practices have, or are setting up, a PPG. Their role is to advise practices on the patient perspective and providing insight into the responsiveness and quality of services. They may also encourage patients to take greater responsibility for their own and their family’s health, support communications with patients and undertake research on behalf of the practice.

Appendix 2: Examples of what is working well in West Oxfordshire

What is working well:

- Range of services available close together in Witney including EMU and MIU
- Primary Care Visiting Service – valued by patients and clinicians, and is very effective in identifying patients who would benefit from EMU.
- Neighbourhood Access Hub has provided helpful extra capacity, and the recent addition of a physiotherapist has been very successful and popular in meeting patient need

At practice level, highlights include:

- 2 practices have successfully introduced 15 minute appointments (Burford, Windrush)
- Windrush Medical Practice has developed a new signposting website with its patient group and including an e-consultation option
- Clinical pharmacists starting at Eynsham and Windrush following successful bid to NHS England
- Well-developed recall approach for patients with long term conditions at Burford
Appendix 3: Patient and Public engagement and involvement

Public & Patient Partnership West Oxfordshire (PPPWO) steering group - Discussion of WOLG primary care priorities

Fergus Campbell (Locality Coordinator) attended the PPPWO steering group meeting on 13 June 2017 to discuss the West Oxfordshire Locality Group draft priorities for primary care (version 2). He had circulated these to all members following the WOLG meeting on 8 June.

The PPPWO meeting suggested the following:

- Meeting the needs of the growing and ageing population should be a very high priority
- GPs having access to faster and more accessible diagnostics closer to home for the patient (avoiding journeys to Oxford hospitals)
- Explicit focus on reduced time to access routine appointments
- Add a focus on prevention and public health improvement
- More clearly addressing the needs of isolated rural populations
- Expand the scope of integrated working to reference ambulance services, social care and voluntary sector

The meeting also discussed that:

- As patients we recognize that things need to change and understand the need to use non-GP clinical staff for many routine things
- Equipping GPs to manage mental illness in the community more effectively. This is especially important in those with serious mental illness who fall outside the community-based psychological support services

Key themes from the meetings with former patients of Deer Park Medical Practice (see appendix 4 for more detail regarding the practice):

- Queries and reminders that the IRP advice was to not preclude having a GP practice in Deer Park Medical Centre (DPMC)
- Lack of confidence that OCCC is following the IRP advice
- Concerns from previous DPMC patients about waiting times at their new practices and difficulties with online appointment availability and impact of closing Deer Park has had on this
- When looking at expansion of primary care / new premises will the DPMC building be considered?
• Concern raised that the IRP response was focused on Witney and surrounds but the CCG plans address wider West Oxon issues
• Concern raised that there needs to be more engagement in the development of the Locality plan
• Proposal for services to be re-opened at Deer Park or somewhere in West Oxfordshire - more doctors to allow more appointments available. The hub appointments not sufficient for population
• Recognise there is a conflict of interest with GP practices; APMS contracts are different and challenges of recruiting GPs are not as big

Key themes from the patient engagement event in Witney (1 November 2017) attended by 62 residents:

This feedback will help shape and inform the draft locality plans before they are published in January 2018. A full report on this public engagement and its feedback will be published alongside the plans.

<tbody>
<tr>
<td>Population growth/housing development</td>
<td>• OCCG must cooperate more with the councils to get funding for health infrastructure</td>
</tr>
<tr>
<td></td>
<td>• Work with developers</td>
</tr>
<tr>
<td></td>
<td>• Need to be planning ahead</td>
</tr>
<tr>
<td>Access to GP appointments</td>
<td>• Not acceptable to wait two - three weeks</td>
</tr>
<tr>
<td></td>
<td>• Poor experience – had to go home to phone for an appointment even though I was already at the surgery</td>
</tr>
<tr>
<td></td>
<td>• Appointments – some practices have a phone-back system which works well</td>
</tr>
<tr>
<td></td>
<td>• Want continuity of care but difficult to get appointment with named GP</td>
</tr>
<tr>
<td></td>
<td>• Important for people with LTC to see own GP who knows you well</td>
</tr>
<tr>
<td></td>
<td>• Phoned 111 and saw doctor in Witney, experience very good</td>
</tr>
<tr>
<td></td>
<td>• Early visiting service works well</td>
</tr>
<tr>
<td>Access to other clinicians/pharmacists</td>
<td>• Should be able to book to see a nurse, not just GP</td>
</tr>
<tr>
<td></td>
<td>• Pharmacies could be used more as a first point of contact</td>
</tr>
<tr>
<td></td>
<td>• Pharmacists have skills but not authority to prescribe</td>
</tr>
<tr>
<td></td>
<td>• More use of triage</td>
</tr>
<tr>
<td></td>
<td>• More training of receptionists</td>
</tr>
<tr>
<td></td>
<td>• May not need to see a GP – other professionals could be first point of contact e.g. physio</td>
</tr>
<tr>

<td>• Shortage of clinical workers is a problem for the proposals</td>
</tr>
<tr>
<td></td>
<td>• Provide affordable accommodation to help recruit more GPs</td>
</tr>
<tr>
<td></td>
<td>• Recruitment vital to sustain services</td>
</tr>
<tr>
<td></td>
<td>• Important for patients to raise funding/investment in GP services issues with their MPs</td>
</tr>
</tbody>
</table>
| IT | • Upskilling workforce  
• Patients’ notes: not everyone can see them, would assist continuity  
• Electronic conversations – better use of email and website communications  
• Don’t assume everyone has internet or mobile access. Need paper versions of information  
• Online booking/ access to notes / prescriptions is good  
• Integration of IT systems to encourage more use of computers |
| --- |
| Prevention/social prescribing | • Not enough emphasis on keeping well  
• More education in schools about staying healthy  
• Need to focus on younger generation  
• Invest time with young people  
• Social prescribing is a good idea e.g. walking groups  
• Age UK offers exercise to prevent falls  
• Paid person to be a befriender or supporter for social prescribing  
• Keep older people active |
| Witney Community Hospital | • EMU works well  
• Better use of Witney hospital – gerontologist used to be based there – why was this stopped  
• Maintain and expand Witney Hospital; expand the MIU so it can stay open longer and increase capacity |
| Mental Health | • Not enough support for young people  
• School counsellors have long waiting lists |

**Key themes from the patient engagement event in Carterton (8 November 2017) attended by 42 residents:**

A full report on this public engagement and its feedback will be published before the end of 2017. This feedback will help shape and inform the draft locality plans before they are published in January 2018.

<table>
<thead>
<tr>
<th>Key Themes</th>
<th>Summary of issues</th>
</tr>
</thead>
<tbody>
<tr>
<td>Continuity of Care</td>
<td>• People want to know they can talk to someone when vulnerable.</td>
</tr>
<tr>
<td>Transport</td>
<td>• Getting to hospitals in Oxford - time is so difficult and parking so stressful. Couldn't we set up a skype consultation/video - even if people went into Witney to do this? It would save on transport/ time / stress and make use of technology to cut down on people going</td>
</tr>
<tr>
<td>Money/Charging</td>
<td>• People coming from abroad should pay for treatments.</td>
</tr>
<tr>
<td>Draft West Oxfordshire Locality Place Based Plan</td>
<td>47 of 50</td>
</tr>
<tr>
<td>--------------------------------------------------</td>
<td>----------</td>
</tr>
<tr>
<td><strong>Think it reasonable to be charged housekeeping for food - the money should go to medical care. But some people find it hard to feed themselves anyway - means testing nightmare.</strong>&lt;br&gt;- Money to pay for services in limited to patients need to be given choices&lt;br&gt;- Are these plans affordable?&lt;br&gt;- Government need to put more money in the NHS&lt;br&gt;- Agency staff are better paid - bad for patient.&lt;br&gt;- Better pay would help recruitment and staffing. There is no pay rise.&lt;br&gt;- Money - Go regularly to eye hospital/JR. It costs £68m p.a. for patients not turning up - patients should be charged for this.</td>
<td></td>
</tr>
<tr>
<td><strong>Housing</strong>&lt;br&gt;- Housing development - In this area are they looking at creating a new surgery?&lt;br&gt;- How will they cope with this?&lt;br&gt;- Where are people going to go if surgeries are already full?</td>
<td></td>
</tr>
<tr>
<td><strong>Structure of GP Practices</strong>&lt;br&gt;- Why can’t we require GPs to work in NHS for some time before they go to private practice?&lt;br&gt;- Sharing back office functions - couldn’t support more. Council has saved £9m a year in avoiding duplication - small pool of very well trained admin staff.&lt;br&gt;- Length of time to get an appointment an issue&lt;br&gt;- Waiting times for appointments need to go down&lt;br&gt;- A lack of GPs in the Eynsham GP practice so there is pressure on GPs as they have a work load; need to recruit more GPs at the surgery&lt;br&gt;- Why can’t practices list conditions that other staff can deal with - signposting&lt;br&gt;- Physios could take a huge load off GPs - muscular skeletal etc&lt;br&gt;- Community based teams - ideal to spot emergencies before they happen</td>
<td></td>
</tr>
<tr>
<td><strong>DTOC</strong>&lt;br&gt;- On the whole the NHS is a v good service. It’s aftercare - ‘bed blocking’ and time it takes from knowing the person is fit to go home, to the time it takes to get a plan in place.&lt;br&gt;- Used to be intermediate care - maybe nursing homes are taking their place? But they are full.&lt;br&gt;- Recognise that high level full on provision isn’t there. It’s the convalescent stage during that transition that is needed at a local level.&lt;br&gt;- Out of hospital discharge&lt;br&gt;- Social Care&lt;br&gt;- Poor sharing of discharge information from OUH.&lt;br&gt;- Overnight stay - discharged and notes transferred to GP. Patient had notes.&lt;br&gt;- Used to be intermediate care - maybe nursing homes are taking their place? But they are full.</td>
<td></td>
</tr>
<tr>
<td><strong>Technology/Communication</strong>&lt;br&gt;- If I go to Swindon - the letters don’t go back to your GP/the right place - e.g. Cancer treatment in Swindon. Results don’t get referred back? Technology to save time and communicate/share information.&lt;br&gt;- Had test at Witney hospital but they didn’t know about it at the JR.</td>
<td></td>
</tr>
</tbody>
</table>
| Pharmacy | • Better communications between OUH, GP Surgery, patients at pharmacist without discharge summary.  
• Language about the elderly - it’s not our fault  
• Hospital admin not good, duplicate letters - bad service. Staff frustrated at the hospital with it - problems.  
• Website improvement and communication.  
• Cuts NHS to pharmacist - cuts income by 15%. Independent pharmacies.  
• Pharmacist availability also a problem. GP employ pharmacist to do medicine reviews - new idea.  
• Pharmacist skill mix  
• Need more pharmacists to save GP time |
| Future services | • Walk-in services in town centres, shopping areas (i.e. where people are during the day or can get too easily) - for advice, and minor conditions. A good way to promote self-care.  
| Receptionists | • Don’t want to see receptionists triaging patients  
• Using receptionists to triage is cost effective for the NHS  
• Receptionist are rude |
| Mental Health | • A mental health nurse should be attached to each practice  
• Need to look at self-harm rate in south Witney which is above average  
• People with mental health issues need more support |
Appendix 4: Deer Park Medical Practice & Independent Reconfiguration Panel Advice

Following an unsuccessful procurement process, Deer Park Medical Practice in Witney closed on 31 March 2017. Its patient list was dispersed to surrounding practices. OCCG worked with the GP practice and its 4,399 patients to ensure that the list dispersal was managed in a safe and orderly way. OCCG also worked with the other practices in Witney to help minimise any impact on their services as Deer Park closed. This included extra investment over the transition period to support practices registering large numbers of patients and to fund additional appointments in the local GP access hub.

In December 2016 a member of Deer Park Medical Practice Patient Participation Group requested a judicial review on the decision to close services at Deer Park Medical Centre. The judge hearing the case in February 2017 refused permission to bring a judicial review, however the Oxfordshire Health Overview and Scrutiny Committee referred the matter to the Secretary of State (SoS) for Health on the grounds that the closure was a substantive change in service. In March 2017 the referral was passed to the Independent Reconfiguration Panel (IRP) for initial assessment in line with the protocol for handling contested proposals for the reconfiguration of NHS services.

The IRP concluded that the referral was not suitable for a full review because further local action by the NHS with the HOSC could address the issues raised. The SoS responded to HOSC on 3 July 2017 with a copy of the IRP review confirming he had accepted their recommendations in full. This letter was shared with the OCCG by HOSC.

On 25 July 2017 NHS England (NHSE) wrote to the CCG confirming their expectations that OCCG would address the recommendations from the IRP and in particular:

1. The CCG must continue actively to pursue the objective that all former DPMC patients are registered as soon as possible.

2. The CCG should immediately commission a time limited project to develop a comprehensive plan for primary care and related services in Witney and its surrounds. At the heart of this must be the engagement of the public and patients in assessing current and future health needs, understanding what the options are for meeting their needs and co-producing the solutions. This work should seek to produce a strategic vision for future primary care provision in line with national and regional aims and should not preclude the possibility of providing services from the Deer Park Medical Centre in the future. (NHSE added that this needs to be linked to, and integrated with, the wider OCCG and Sustainability & Transformation Programme plans for the whole of Oxfordshire).

11 IRP initial review is available at: https://www.gov.uk/government/publications/irp-deer-park-medical-centre-witney-initial-assessment
OCCG had already written to Deer Park Medical Centre patients advising them of the closure and alternative practices in their local area. In response to the IRP’s recommendations OCCG has continued to pursue patients who had not yet registered with another practice. In total four letters have been sent to patients who remain on the Deer Park patient register with advice about how to register with another practice and the importance of doing so. Telephone advice and help has also been made available and information has been shared widely with the local media, Healthwatch, local GP practices and their PPGs and on the CCG website. On 1 November 2017, there were 315 Deer Park Medical Centre patients who had not yet registered elsewhere.

As outlined in this locality plan, along with GP colleagues, OCCG have developed a Primary Care Framework to provide strategic direction for a sustainable GP service in Oxfordshire. As the IRP recommendations were published, work was already underway to develop a locality place based plan for West Oxfordshire; patient and stakeholder engagement and involvement is an integral part of this process and the developing plan is being tested with the public, PPGs, local councillors and wider stakeholders. The development of this plan incorporates the IRP recommendations; engagement activity with the local community is outlined in appendix 3 above. Whilst the plan will be published as a first version in January 2018, the process of engagement on the long term future of primary care in the West locality is iterative and will continue as primary care starts to address in more detail long term sustainability of premises, practice size and workforce.
